PROJECTS --

Lead Analysis System (Django, HTML5, JavaScript, CSS, Python, MySQL)

- A dashboard page where the admin can set the date and analyze the leads.
- A Daily Performance Report (DPR) page that shows every employee's lead analysis. The admin can also filter by team, individual employee, or dates.

Course Management System (React.js, Django Rest Framework, MySQL, Postman)

- A dashboard created for students, coordinators, and admins.
- Students can see a list of courses and purchase them.
- Coordinators can apply CRUD (Create, Read, Update, Delete) operations on courses.
- Admins can perform any actions, Approval of courses, CRUD operations on courses and coordinators, Adding and managing coordinators.

JWT Auth Integration (HTML5, CSS, Python, Django Rest Framework, React.js)

- Integrated JWT authentication to secure API endpoints and manage user authentication.

- Utilized Django Rest Framework for backend API development.

Room Rental Web App (Django, Python, CSS, HTML5, JavaScript, MySQL)

- Room seekers can set filters, search for rooms, and book them.
- Room owners can list their properties for rent.
- Introduced search filters for room seekers and Django authentication for user management.

Live Weather Web App (HTML5, CSS, Django, Free Weather API)

- Users can search for a city to see the temperature and weather details.

Web Scrapping Bot (HTML5, CSS, Python, Django, Selenium)

- Developed a website allowing users to input XPath to scrape targeted web data using Selenium.
- Put in place a bot that uses user-provided XPath queries to retrieve online data.
