Backend Developer – Python | Django | DRF | PostgreSQL | Redis | RabbitMQ | Celery

PROFESSIONAL SUMMARY

Backend Developer with 1.5+ years of experience designing and building scalable, RESTful API–driven SaaS applications using Python, Django, Django REST Framework, PostgreSQL, Redis, RabbitMQ, and Celery. Experienced in multi-tenant architectures, asynchronous task processing, workflow automation, database query optimization, production issue resolution, and enterprise insurance platforms. Strong background in designing configurable business workflows and optimizing scalable backend systems.

TECHNICAL SKILLS

Languages: Python, JavaScript
Backend: Django, Django REST Framework, REST APIs, Django Tenants
Databases & Caching: PostgreSQL, MySQL, Redis, RabbitMQ, Celery
Cloud & Tools: AWS, Linux, Git, GitHub, Git Flow
Frontend: HTML5, CSS3, Bootstrap, React

EXPERIENCE

Coverstack Technologies Pvt Ltd
Feb 2026 – Present
Backend Developer — *Bangalore, Karnataka*

- Engineered and maintained 3+ core modules for a multi-tenant insurance POS platform using **Python, Django, DRF, PostgreSQL, and Django Tenants**, supporting tenant-isolated workflows across multiple insurance partners.
- Implemented **6+ configuration-driven business workflows**, reducing partner-specific code changes and accelerating onboarding of new insurance products.
- Resolved **14+ critical production issues** related to agent onboarding, hierarchy management, and policy mapping, improving platform stability and operational efficiency.
- Implemented a Manager–Managee Mapping module supporting **300+ agents and managers**, strengthening reporting structures and role-based access control.

Fyn Mobility
Feb 2025 – Feb 2026
SDE 1 — *Bangalore, Karnataka*

- Revamped the fleet management platform using **Python, Django, PostgreSQL, HTML, CSS, and JavaScript**, improving operational workflow efficiency by **15%**.
- Architected and delivered an end-to-end EV rental platform supporting **500+ rental bookings**, implementing enquiry-to-order, vehicle allocation, and booking lifecycle management using **Django REST Framework**.
- Built and integrated **7+ REST APIs** for rental operations, vehicle allocation, and order processing workflows, following RESTful API design principles.
- Integrated **RabbitMQ and Celery** for asynchronous task processing and communication between fleet and rental systems, reducing manual coordination effort by **60%**.

PROJECTS

Refynd
July 2025

- Engineered a scalable marketplace for renting EV vehicles, featuring configurable pricing and seamless enquiry-to-order workflow.
- Built an administrative dashboard for user management, enquiries, and order tracking, improving operational visibility and reducing manual tracking effort.
- Utilized **Python, Django, and Redis** for caching, and integrated **RabbitMQ and Celery** for efficient asynchronous cross-platform communication.

Multi-Tenant School Management System
Oct 2025

- Designed and developed a multi-tenant SaaS School Management System using **Django, Django Tenants, PostgreSQL, and REST APIs**, enabling isolated data management for multiple schools from a single platform.
- Implemented complete school onboarding workflows supporting **1000+ students and staff** per tenant, including student admission, employee management, attendance tracking, examination management, and report card generation.
- Built modules for attendance, marksheets, performance analytics, fee management, notifications, and role-based access control to streamline day-to-day school operations.

EDUCATION

B.Tech – Computer Science and Engineering
Jun 2020 – July 2024
SAGE University, Bhopal CGPA: ***7.6 / 10*** — *Bhopal, Madhya Pradesh*
